

Running Your Loyalty Program

A practical guide for the Maverick team operating CustomerConnect day to day. Written for non-technical staff. Version 1.0 — July 2026.

1. Roles: who does what

- Super-admin (Loyalty@mavericktelecom.co.za): reserved for creating/removing admin accounts and sensitive changes only. Do not use it for daily work.
- Admin / Manager: daily operations — approving flagged receipts, adjusting customer points, managing the rewards catalogue and offers.
- Analyst: read-only reporting access. Give this to marketing and finance rather than admin rights.
- Rule of thumb: give every person the lowest role that lets them do their job, and remove access the day someone leaves.

2. Daily routine (about 15 minutes)

- Open the admin dashboard and clear any receipts waiting in review.
- Skim the audit log for anything unexpected. Every sensitive action is recorded, and contact-detail resets can be undone with one click.
- Check for reward redemptions that need fulfilment (especially physical rewards — couriers should go out within 7 working days).

3. Weekly routine

- Review total outstanding points (points liability). This is a real financial number — share it with finance.
- Look for suspicious patterns: the same receipt claimed by multiple accounts, or unusually fast point earning.
- Refresh personalised offers and campaigns so returning customers see something new.
- Check the support inbox is being answered within your target time (24–48 hours is standard).

4. Monthly maintenance

- Check the deployment logs in Replit for errors or unusual activity.
- Open the SendGrid dashboard and check bounce and spam rates — a rising bounce rate quietly breaks sign-up emails.
- Confirm database checkpoints/backups look healthy.
- Review this month's new sign-ups and redemption trends in the analytics dashboard.

5. Quarterly tasks

- Rotate the super-admin password and the SendGrid API key.
- Audit the admin user list: remove anyone who has left or changed roles.
- Re-read the Privacy Policy and Terms against current POPIA guidance. If wording changes materially, bump the terms version so customers re-accept at next sign-in.
- Plan ahead for points expiry: points lapse 24 months after they are earned. Warn affected customers before their points expire — silent expiry is the number one loyalty-program complaint.

6. Content you can change yourself (no developer)

- Rewards catalogue: add, edit, price and retire rewards from the admin dashboard.
- Offers and campaigns: create and schedule from the dashboard.
- Customer accounts: adjust points, correct contact details (audited, undoable).

Changes that need a developer

- FAQ answers, policy wording, earn rates per product category, tier thresholds. Batch these up and request them together.

7. Guardrails — please never skip these

- Never edit the production database directly. Always work through the admin dashboard so every change lands in the audit log.
- Test changes in the development environment first, then publish. Publishing applies database changes to production automatically.
- Never share the super-admin login. Each staff member gets their own account.
- If you suspect fraud or a data incident, note the time, stop using the affected account, and contact your developer and Information Officer immediately. POPIA requires notifying the Information Regulator of qualifying breaches.

8. Costs and scaling

- Replit hosting scales automatically. The main thing to watch is database growth from receipt images and transactions — plan an archival policy after year one.
- SendGrid free tier covers about 100 emails per day; upgrade when sign-up volume grows.

9. Quick reference

- Customer app: your published URL (and custom domain once connected).
- Admin dashboard: /admin (requires an admin account).
- Help & FAQ for customers: /help Privacy: /privacy Terms: /terms
- Support mailbox: support@maverick.co.za Privacy requests: privacy@maverick.co.za (respond within 30 days under POPIA).
